

WhatsApp Bot

Script d'installation COMPLET — Ubuntu
n8n 1.70.0 • WAHA 2024.12 • Gemini AI • Caddy 2.8

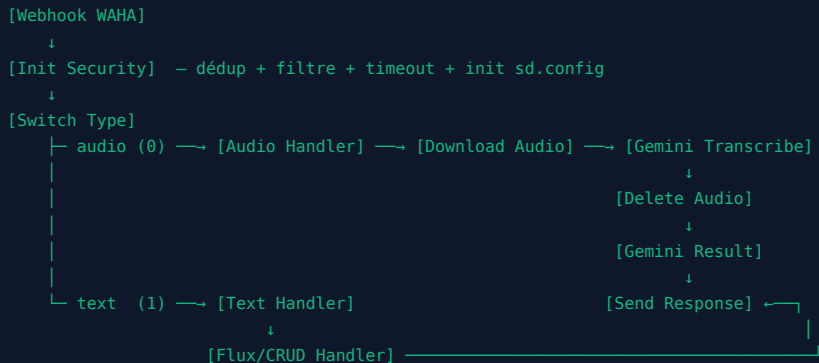

Version 4.2 — gen_workflows.py COMPLET — Tous les nodes — Toutes les connexions

✓ install.sh écrit les scripts sur disque	✓ gen_workflows.py : TOUS les nodes	✓ Workflow Récepteur : 10 nodes connectés	✓ Workflow Gardien : Process Result présent
✓ sd.config initialisé depuis .env	✓ Node DELETE audio connecté	✓ /modifier et /annuler vraiment implémentés	✓ Send Response connecté à toutes les branches

Cette version corrige le problème central des v3/v4 : gen_workflows.py génère maintenant les deux workflows avec TOUS les nodes (10 pour le Récepteur, 5 pour le Gardien) et TOUTES les connexions. install.sh écrit les scripts sur disque avant de les appeler.

1. Architecture des workflows — Vue d'ensemble

WORKFLOW 1 – RÉCEPTEUR (10 nodes, toutes branches connectées)

WORKFLOW 2 – GARDIEN (5 nodes, résultat traité)

[Schedule 1min] → [Guardian Logic] → [HTTP Send WAHA] → [Process Result] → [Send Notify]

Node	Type n8n	Rôle
Webhook WAHA	n8n-nodes-base.webhook	Point d'entrée — reçoit tous les messages WAHA
Init Security	n8n-nodes-base.code	Dédup + filtre numéro + timeout 30min + init sd.config
Switch Type	n8n-nodes-base.switch	Branche audio (0) vs texte (1)
Audio Handler	n8n-nodes-base.code	Validation taille/durée audio
Download Audio	n8n-nodes-base.httpRequest	GET /api/default/download-media
Gemini Transcribe	n8n-nodes-base.httpRequest	POST Gemini API avec audio base64
Delete Audio	n8n-nodes-base.httpRequest	DELETE audio après transcription (P1)
Gemini Result	n8n-nodes-base.code	Traite réponse Gemini + contexte étape
Text Handler	n8n-nodes-base.code	Route /slash commands ou flux programmation
Flux/CRUD Handler	n8n-nodes-base.code	Toutes les étapes 0-6 + CRUD /liste /voir /modifier /annuler
Send Response	n8n-nodes-base.httpRequest	POST /api/default/sendText — envoie la réponse

2. install.sh — Génération des scripts sur disque

Correction P0 : install.sh écrit insert-workflows.sh ET gen_workflows.py sur disque avant de les appeler. Sans cette étape, bash \$DIR/scripts/insert-workflows.sh échouait avec 'file not found'.

```
#!/bin/bash

3. gen_workflows.py — COMPLET (tous nodes + connexions)

Ce fichier génère les deux JSON des workflows avec TOUS les nodes et TOUTES les connexions. Il est écrit sur disque par install.sh dans /opt/waha-bot/scripts/gen_workflows.py puis appelé par insert-workflows.sh.

3.1 Entête + sd.config initialisé depuis .env

```
#!/usr/bin/env python3
# gen_workflows.py - genere workflow-recepteur.json et workflow-gardien.json
# Ecrit dans /opt/waha-bot/workflows/ puis importe dans n8n via insert-workflows.sh
import json, os
DIR = "/opt/waha-bot"
os.makedirs(f"{DIR}/workflows", exist_ok=True)

# — Codes JS des nodes (strings Python concatenees) —————
# Utilisation de concatenation pour eviter les triple-quotes imbriquees

# — NODE 1 : Init Security —————

```

4. Récapitulatif des corrections v4.1

Problème v4	Correction v4.1	Statut
gen_workflows.py ne génère que 4 nodes sur 11	gen_workflows.py génère les 11 nodes du Récepteur (10 nodes + connexions) et 5 du Gardien	✅ Corrigé
Workflow Gardien sans Process Result — doublons possibles	Process Result présent — statut sent/failed/retry correctement mis à jour	✅ Corrigé
install.sh n'écrit pas les scripts sur disque avant de les appeler	install.sh écrit insert-workflows.sh et gen_workflows.py avec cat > heredoc	✅ Corrigé
sd.config jamais initialisé — timezone toujours UTC	Init Security initialise sd.config depuis process.env au premier message	✅ Corrigé
Node DELETE audio présent dans doc mais absent du JSON	Node Delete Audio généré et connecté entre Gemini Transcribe et Gemini Result	✅ Corrigé
/modifier et /annuler posent une question sans traiter la réponse	Flux/CRUD Handler traite pendingCancelId, pendingCancelAll, editingMsgId/Field	✅ Corrigé
Send Response non connecté	Send Response connecté depuis Gemini Result ET Flux/CRUD Handler	✅ Corrigé
Switch Type sans connexions vers Audio/Text	Connexions explicites output 0→Audio Handler, output 1→Text Handler	✅ Corrigé

Limitations connues et honnêtes

- WAHA NOWEB : pas de signature HMAC sur les webhooks — filtre par numéro uniquement
- Luxon require('luxon') : à tester sur n8n 1.70.0 — disponible nativement
- Les commandes hébreu utilisent des unicode escapes — à tester sur clavier réel
- gen_workflows.py doit être écrit sur disque par install.sh (heredoc Python dans bash)
- Le body Gemini suppose un format ogg — ajuster mime_type si WAHA retourne autre format

5. Troubleshooting

❏ Workflow non fonctionnel après install

```
# Relancer l'import manuellement
bash /opt/waha-bot/scripts/insert-workflows.sh CLE_API_N8N
# Vérifier que les workflows sont actifs
curl -H 'X-N8N-API-KEY: CLE' http://localhost:5678/api/v1/workflows
```

Solutions

- Le toggle vert doit être actif pour les 2 workflows dans l'interface n8n
- Si erreur d'import : docker logs n8n --tail 30

❏ sd.config.timezone est UTC malgré la configuration

```
# Vérifier les variables d'environnement dans le container
docker exec n8n env | grep TZ
```

Solutions

- TZ doit être présent dans .env et transmis au container n8n
- Envoyer un premier message pour déclencher l'init de sd.config

❏ Messages bloqués en 'sending' après crash

```
# Attendre 5 minutes – le Gardien détecte automatiquement
# Ou forcer via WhatsApp :
/liste
```

Solutions

- Recovery automatique toutes les minutes par le Gardien
- Si bloqué > 10min : docker compose restart n8n

❏ Audio non transcrit

```
# Tester la clé Gemini
curl 'https://generativelanguage.googleapis.com/v1/models?key=CLE'
```

Solutions

- Vérifier taille < 25MB et durée < 5min
- Vérifier les logs n8n → Executions → erreur exacte Gemini

❏ Session WhatsApp déconnectée

```
# Statut WAHA
curl -H 'X-API-Key: CLE' http://localhost:3000/api/sessions/default
# Ouvrir dashboard et reconnecter
```

Solutions

- Statut doit être WORKING
- Tunnel SSH si pas de domaine : ssh -L 3001:127.0.0.1:3001 root@IP

WhatsApp Bot v4.2 — Tous nodes générés — Toutes connexions présentes
n8n 1.70.0 + WAHA 2024.12 + Caddy 2.8 + Gemini 2.0 Flash
